

Saramonic®

Vmic

The Saramonic Vmic is a broadcast quality condenser microphone that provides professional audio with DSLR cameras and camcorders.

1 Product Introduction

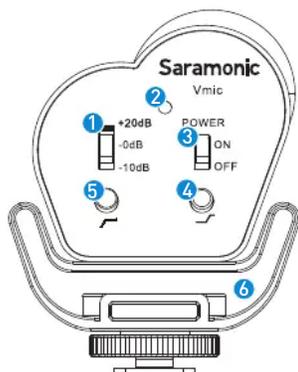

1.1 General Introductions

The Vmic is a broadcast quality condenser microphone that provides professional audio with DSLR cameras and camcorders. The Vmic allows you to adjust level control (-10dB, 0dB, +20dB), high-pass filter(150 Hz), and high-frequency boost(+6dB) to increase intelligibility of dialogue. The detachable 3.5mm cable connects the Vmic to the audio input of the camera, while the stereo headphone output allows you to monitor the incoming audio. The shock mount system provides isolation from vibration and mechanical noise.

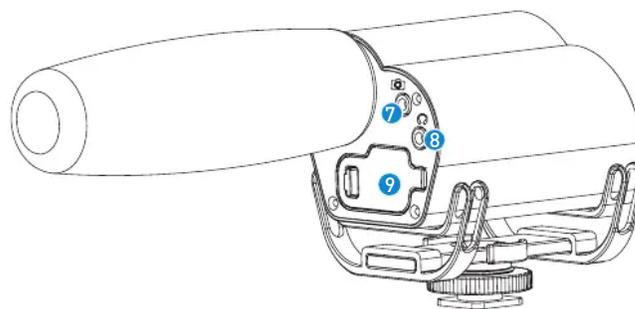

1.2 Highlights

- Super-cardioid polar pattern
- Integrated shock mount system
- High pass filter (150 Hz)
- High frequency boost (+6dB)
- Three position level control (-10dB, 0dB, +20dB)
- Headphone monitor output
- 1/8" audio output jack to camera
- LED power on/low battery indicator
- Wind shield included
- Lightweight all-metal construction
- Powered by two AA batteries

1.3 Product Structure

- 1 Three position level control (-10dB, 0dB, +20dB)
- 2 LED indicator
- 3 Power button
- 4 High frequency boost (+6dB)
- 5 High-pass filter (150Hz)

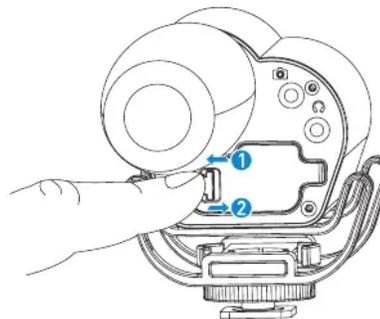

- 7 Audio output jack
- 8 Headphone output
- 9 Battery compartment

2 Set Up Guide

2.1 Install the battery

- 1 Lock the battery compartment
- 2 Unlock the battery compartment

Insert the AA batteries into place aligning + and - polarity as shown.

2.2 Attach the Vmic to your camera's or camcorder's hot shoe. Connect the supplied audio transmission line from Vmic's audio output to the MIC input of the camera or camcorder.
